

Project Proposal

Landin Jones

BlogWebsiteForMom

It was originally going to be created with WordPress but changed my mind to grow more experience in coding after emailing the teacher. I know how to use WordPress well, so instead of using something I can use pretty good, I wanted to test my skills with this project by doing everything from the ground up by code.

The Blog Website will include:

- Custom Html, CSS, JavaScript and PHP code
- A Home Page
- About Me Page
- Custom Backgrounds and fonts
- Multiple Different Blog Pages for the different topics that will be in the blog.
- Topics being, Recipes, Seasonal Decorating, Gardening and Homemaking.

The Breakdown of the tasks and the number of hours predicted to take for each entry is (These Times may not be completely accurate and may take more time that what is written);

1. Getting myself familiar with html, CSS, PHP and JavaScript again. **2-Hours**
2. Research of Blogs and see what they do – **2 Hours**
3. Watch Some Video on the topic – **2 Hours**
4. Come up with a rough draft of the different pages including the home page and blog pages. **1 Hour**
5. Come Up with the fonts and colors I want to use on the site. **1 Hours**
6. The Home Page and About Me Pages – **3+ Hours**
7. Writing For each blog post 500-1000 words and taking the pictures – **1 Hour each Post**
8. Add the post to the site - **1 Hour each Post**
9. Edit and take the images for each post – **2 Hours**
10. Debugging any errors in the code and fix them. Including Broken Links or layout issues – **3 Hours**
11. 9 Design the different posts – **1 Hour per blog Post**
12. Design the separate pages that will contain the Recipes, Seasonal Decorating, Gardening and Homemaking pages- **4 Hours**

I already have ideas for over 20 Blog Posts that will accommodate around 20+ hours to create them. May do less if I am over the allotted time of 50 Hours.

The dates of everything consists of:

- Week #9 – Create the concept of the home page and the corresponding blog pages on a piece of paper as a rough draft and then start creating the home page and about me page first and make sure there are no errors in the code.
- Week #10 – Create the 4 other Topics pages and tie it all together into a menu for the top of every page. Choose Fonts and a background color using CSS for the overall layout of the pages.
- Week #11 – Start one of the blog topics by writing what will be on the page. 500-1000 words with engaging headlines and visuals recommended for search engine optimization. Each page will include taking and importing my own pictures to the site.
- Week #12 – Continue by doing different blog post topics (writing 500–1000-word essays for each topic) and making sure there are no errors in the code. Report what I've done each week.
- Week #13 – Continue to add different posts and make sure everything outlined in the draft from week #9 has been added to the site. Go over it and make sure it has no errors or bugs that crash the site or make it broken.
- Week #14 – Have some family members go through, test and give thoughts on the website thus far. Test the site in different browsers, also test the site on Android and Apple devices.
- Week #15- Make sure the site is responsive to mobile devices. Revisit the design of the website and make sure it has what I envisioned when I created the rough draft in week #9. Finally make sure the different menu, links to other sites or within the site works perfectly.
- Week #16- Final week to prepare the site before posting it for the final grade. Make sure everything is functioning as intended and the blog posts highlight and are captivating to read.
