Brief Recap:

Tasks Breakdown

Before starting my capstone project, I took some time to rewatch videos and refresh my knowledge of HTML and related web development skills, since it had been a while since I last used them. Once I felt ready, I began creating content by writing seven different blog posts. My mom and I also went out to take original photos to include each post. I built the blog using HTML files and styled everything with CSS to make each page visually appealing. In addition to the individual blog posts, I created an "About Me" page and a main blog page that links to all the posts I've written. Overall, I'm happy with how the project turned out. I had originally planned to write 15–20 posts, but I quickly realized that the process was more time-consuming than I had expected. Each post took several hours to write, format, and pair with images, plus another 1–2 hours to fully integrate into the website. Even though I completed fewer posts than I initially planned, I'm proud of the quality and effort behind each one. Looking ahead, I'm excited about the possibility of adding more pages and continuing to build on this project in the future.

Since I worked on a variety of different tasks, the time required for each one varied. I used my ClickUp project management system to keep track of what I was doing and ensure I was accurately logging my time. Here's a breakdown of the main tasks I completed during the project:

1. Getting myself familiar with html, CSS, PHP and JavaScript again
2. Research of Blogs and see what they do
3. Watch Some Video on the topic –
4. Come up with a rough draft of the different pages including the home page and blog pages.
5. Come Up with the fonts and colors I want to use on the site
6. The Home Page and About Me Pages
7. Writing For each blog post 500-1000 words and taking the pictures
8. Add the post to the site
9. Edit and take the images for each post –
10. Debugging any errors in the code and fix them. Including Broken Links or layout issues –
11. Design the different posts –

Total Hours 45

Incomplete Tasks

As said above I originally planned for 15-20 posts, but only got two finishing 7.

Proof of finish:

Week 11

(This doesn't consider the videos and stuff I watched which is why only 6:30 is in the image) I made sure to keep track in other documents:

Total Time:

32 Hours

Week 16(Extra Week)

This was a Brutal Week finishing everything and cleaning up the site since my internship ended. I ended up Creating one last final grand post a recipe which took longer than usual since I wanted to try something new unlike all my other posts. I took into account the time that I spent making the recipe as well.
